DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-13 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steierman (US 4,065,697).

Regarding claims 1-13 and 16-18, Steierman discloses a CRT tube including the following substances in percent weight:

$Si0_2$	45-70	Na_2O	3-10
Al_20_3	0-6	K_2O	5-15
MgO	0-3	ZrO_2	0
CaO	0-8	TiO_2	0
SrO	0-15	CeO_2	0-1
BaO	0-20	$\mathrm{Sb_2O_3}$	0-1
ZnO	O	P_2O_5	0

These ranges include all values and combinations possible with the numbers listed above.

Further Steierman specifies as little as 0% lead oxide in the disclosed tube. (Column 2 lines 32-47). Steierman does not however appear to specify the X-Ray absorption coefficient of 28.0⁻¹ or more at 0.6Å, however the x-ray absorption is a product of the tube composition, specifically the amounts of lead oxide, BaO, and SrO. In this case the compositions of the materials specified do fall within the ranges that would provide the X-Ray absorption coefficient as claimed. Therefore the tube as taught would have an X-Ray absorption coefficient of 28.0⁻¹ or more at 0.6Å.

Application/Control Number: 09/939,897

Art Unit: 2879

Regarding claim 19, Steierman further discloses the use of colorants in some percentage of 0% or more.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Steierman (US 4,065,697) in view of Yanagisawa et al. (US 6,251,811).

Regarding claim 15, Steierman discloses the tube as claimed but does not specify the use of TiO₂ in concentrations of 0.1-2.0% by weight. However Yanagisawa, in the same field of tube manufacture, discloses the use of TiO₂ in concentrations of 0.5% by weight in order to beneficially adjust the viscosity of the glass. (Column 6 lines 7-14). Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to incorporate TiO₂ in concentrations of 0.5% by weight as disclosed by Yanagisawa into the CRT tube taught by Steierman in order to beneficially adjust the viscosity of the glass.

Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Steierman (US 4,065,697) in view of Petersen et al. (US 4,804,885).

Regarding claim 14, Steierman discloses the tube as claimed but does not specify the use of ZrO_2 in concentrations of 0.1-2.5% by weight. However Petersen, in the same field of tube manufacture, discloses the use of ZrO_2 in concentrations of 0 – 14% by weight in order to beneficially attenuate the x-ray radiation. (Column 4 lines 60-67). Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to incorporate ZrO_2 in concentrations of 0 – 14% by weight as disclosed by Petersen into the CRT tube taught by Steierman in order to beneficially attenuate the x-ray radiation.

Art Unit: 2879

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yoon et al. (US 6,448,707) discloses a CRT tube with BaO and SrO as primary x-ray attenuators.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matt P Hodges whose telephone number is (703) 305-4015. The examiner can normally be reached on 7:30 AM to 4:00 PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (703) 305-4794. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7382 for regular communications and (703) 308-7382 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
